

Mental Health/Substance Use Care¹: Clinic/Health Center Readiness Assessment²

The following checklist contains information about recommended capacities to consider in implementing mental health/substance use care strategies in a clinic or health center. In the blank spaces provided, indicate which statement is the **best fit** for the given statement. This assessment may be completed individually by each member of your clinic team or collectively as a group to assist your team in providing best practice mental health/substance use care for persons living with HIV in your program. Since every clinic and every patient population is different, there is no one way to be a best-practice. Providing best-practice is an ongoing process of evaluation, implementation, and re-evaluation. For help using this tool in your clinic, please contact at the following link, info@aidsetc.org.

Staff/Clinical Team Readiness	Not a current priority	We have discussed this issue	We are developing a plan to address this issue	We are implementing a plan to address this issue	We are evaluating our implemented plan to address this issue	We are making adjustments to our plan to better address this issue	AIDS Education & Training Center services requested
1. There is ALL STAFF recognition of the need for Mental Health/Substance Use Care services in our clinic.							
2. Our clinic staff knows what Mental Health/ Substance Use Care includes (Screening, Diagnosing, Treatment, and Follow-up - including referral to other services as needed).							
3. Our clinic has leadership buy-in to increase our Mental Health/Substance Use Care activities.							
4. Our clinic has identified an available Mental Health/Substance Use Care champion .							
5. All of our clinic staff is invested in improving our patient Mental Health/Substance Use Care.							

1 "Mental Health/Substance Use Care" refers to an evidence-based, comprehensive plan of care that efficiently and effectively identifies those with untreated mental illness including substance use disorders, engages them into evaluation, diagnosis, treatment, and follow-up to best manage their illness and improve their overall quality of life.
 2 Based on a template from: Centers for Disease Control and Prevention. (2005). Anti-Retroviral Treatment and Access to Services (ARTAS): An individual-level, multi-session intervention for people who are recently diagnosed with HIV: Implementation Manual. Retrieved from: www.cdc.gov/hiv/topics/cba/pdf/artas_implementation_manual.pdf

Assessment Readiness	Not a current priority	We have discussed this issue	We are developing a plan to address this issue	We are implementing a plan to address this issue	We are evaluating our implemented plan to address this issue	We are making adjustments to our plan to better address this issue	AIDS Education & Training Center services requested
1. Our clinic routinely uses a validated, standardized tool to screen all HIV-infected patients for depression.							
2. Our clinic routinely uses a validated, standardized tool to screen all HIV-infected patients for hazardous substance use.							
3. Our clinic routinely uses a validated, standardized tool to screen all HIV-infected patients for other commonly occurring mental health conditions.							
4. Our clinic has a system in place to respond immediately to patients who screen positive for depression or hazardous substance use (including a protocol for patients who are actively suicidal or homicidal).**							
5. Our clinic has a mechanism for targeting mental health interventions to more vulnerable populations (e.g., those experiencing resistance to mental health care or those with population-specific needs such as children, adolescents, pregnant women, elderly, and homeless).							
6. Our clinic formally assesses cultural and health beliefs regarding mental illness and mental health care.							

Capacity Readiness	Not a current priority	We have discussed this issue	We are developing a plan to address this issue	We are implementing a plan to address this issue	We are evaluating our implemented plan to address this issue	We are making adjustments to our plan to better address this issue	AIDS Education & Training Center services requested
1. Our clinic has the capacity to assign services to patients based on mental health acuity (the greater the acuity, the sooner the service).							
2. Our clinic has an onsite mental health professional available for consultation when a patient screens positive for depression.							
3. Our clinic has an onsite mental health professional available for consultation when a patient screens positive for hazardous substance use.							
4. Our clinic has a waiting list to see a mental health professional.							
5. If a waiting list is used, the wait at our clinic to see a mental health professional is usually LESS than one week .							
6. Our clinic has a prescribing clinician who is not a mental health professional but is willing to medically monitor and prescribe psychotropics as needed in consultation with a psychiatrist.							
7. Our clinic refers patients needing a mental health evaluation to a mental health professional outside the clinic.							
8. Our clinic has an assistance and follow-up plan to help patients make and keep referral appointments.							
9. Resources are available in our clinic to assist patients with obtaining needed, prescribed psychotropic medications (i.e. for those without insurance or for those whose prescription is not on formulary of ADAP or insurance plan).							

Capacity Readiness	Not a current priority	We have discussed this issue	We are developing a plan to address this issue	We are implementing a plan to address this issue	We are evaluating our implemented plan to address this issue	We are making adjustments to our plan to better address this issue	AIDS Education & Training Center services requested
10. In our clinic, ALL staff is trained to be aware of acute needs of those exhibiting mental illness (i.e., front desk staff, medical/nursing assistants who may need to get help for a patient not being seen by a clinician while in waiting room or on phone) and how to respond appropriately and safely.							
11. Our clinic has the capacity to provide Mental Health/ Substance Use Care services to those with low-literacy skills .							
12. Our clinic has the capacity to provide Mental Health/ Substance Use Care services to those who do not speak or read English .							
13. Our clinic staff has implemented policies and procedures to allow for maximum reimbursement of mental health services provided in our clinic.							
14. State-of-the-science guidelines are the cornerstone of mental health and substance use disorder treatment plans used in our clinic.							

Community Readiness	Not a current priority	We have discussed this issue	We are developing a plan to address this issue	We are implementing a plan to address this issue	We are evaluating our implemented plan to address this issue	We are making adjustments to our plan to better address this issue	AIDS Education & Training Center services requested
1. Our clinic has relationships with community mental health clinics, community-based mental health professionals , or other support services (including psychiatric emergency services).							
2. Our clinic has clear, specific engagement-related roles for community partners (e.g., co-location of services, referral management dialogue).							
3. Our clinic has formal contracts and/or established referral protocols with existing community partners.							
4. Our clinic has identified resources in the community to secure transportation subsidies or incentives for patients.							
5. Our clinic has strong, positive, collaborative connections to community partners including community mental health facilities.							
6. Our clinic has familiarity and collaborations with health insurance marketplaces in our community, and knows the mental health coverage benefits of each.							

Support Readiness	Not a current priority	We have discussed this issue	We are developing a plan to address this issue	We are implementing a plan to address this issue	We are evaluating our implemented plan to address this issue	We are making adjustments to our plan to better address this issue	AIDS Education & Training Center services requested
1. Our clinic has the resources to utilize technology-based interventions to foster Mental Health/ Substance Use Care follow-up.							
2. Our clinic has the resources to provide or obtain Mental Health/Substance Use Care training and education for staff .							
3. Our clinic has the capacity to promote Mental Health/Substance Use Care strategies including Screening, Diagnosing, Treatment, and Follow-up.							
4. In our clinic, there are clear policies and procedures regarding staff member(s) responsibility in monitoring the clinical progress of patients being treated for mental illness using a standardized clinical assessment tool (if monitoring not done by a mental health professional).							

CQI Readiness	Not a current priority	We have discussed this issue	We are developing a plan to address this issue	We are implementing a plan to address this issue	We are evaluating our implemented plan to address this issue	We are making adjustments to our plan to better address this issue	AIDS Education & Training Center services requested
1. Our clinic uses validated, standardized Mental Health/Substance Use Care measures for Screening, Diagnosing, Treating, and Following up.							
2. Our clinic has a process in use to evaluate patient care satisfaction and/or experiences.							
3. Our clinic has a process in use that utilizes data to create changes that will assist in continual quality improvement.							
4. Our clinic has a way to systematically monitor Mental Health/Substance Use Care Screening, Diagnosis, Treatment, and Follow-up data.							
5. Our clinic has a process in place to review and act on results from systematic monitoring on a regular basis (including success feedback to clinic staff).							
6. Our clinic works to identify barriers related to Mental Health/Substance Use Care Screening, Diagnosis, Treatment, and Follow-up , and works to reduce identified barriers for each component on the care continuum.
