Talk to your healthcare provider about taking medicine to cure your hepatitis C.

Once you are cured, you do not need to take hepatitis C medicine any more, and because you no longer have hepatitis C, you cannot give it to anyone else.

Adapted from: Department of Public Health City of Philadelphia. Get Cured! Understanding the New Era of Hep C Treatmen January 2019. Hepatitis C:

Getting Lured is Easier than ever Past: Hepatitis C treatment took up to a year, caused bad side effects and at

best, cured about 50% of people. People with HIV and hepatitis C were less likely to be cured than those who only had hepatitis C.

At Least 90% Cure Ratel

Now: New hepatitis C treatment takes about 3 months, has few or no side effects, and cures at least 90% of people. Hepatitis C medicine works for people with HIV and hepatitis C just as much as it does for those who only have hepatitis C.

PAST		NOW
<ul> <li>A weekly shot (Interferon) + twice daily pills (ribavirin)</li> </ul>	Medications	<ul> <li>1-3 pills once a day</li> </ul>
About 12 months	Treatment Time	<ul> <li>About 2-3 months</li> </ul>
At best, 5 out of 10 people treated were cured	Cure	<ul> <li>More than</li> <li>9 out of</li> <li>10 people</li> <li>treated</li> <li>are cured</li> </ul>
<ul> <li>Depression, fever, chills, upset stomach, fatigue and low energy</li> </ul>	Side Effects	<ul> <li>Usually, no side effects or minor headaches or fatigue</li> </ul>

You can get hepatitis C again if you are not careful. To avoid reinfection and to stay healthy, <u>it is important</u> that you:

- **Do not** share needles, syringes, straws, or other equipment to inject or sniff drugs
- Do not share razors or toothbrushes

- **Use condoms** to prevent hepatitis C or other sexually transmitted infections
- Continue to see your healthcare provider(s) on a regular basis and discuss risks for reinfection
