

About the MATEC Clinician Scholars Program

With a focus on minority and minority-serving clinicians, the goal of the MATEC Clinician Scholars Program is to strengthen the HIV workforce in the Midwestern United States via an intensive, year-long training program focused on HIV care and prevention.

Through mentorship and individualized learning opportunities designed within the clinician's care setting around eleven specific capabilities, participating clinicians gain the knowledge and skills necessary to enable them to provide quality, patient-centered HIV care, and ultimately impact the HIV Care Continuum. Evidence from outcome data analysis to date shows that clinicians leave the program better prepared to:

- Diagnose HIV infection
- Provide HIV medical care and/or refer to local HIV care resources
- Prescribe antiretroviral therapy (ART) or counsel on the benefits of ART
- Support patients in achieving viral suppression

This contributes to moving the United States closer to reaching the four primary goals of the National HIV/AIDS Strategy:

1. Prevent new HIV infections
2. Improve HIV-related health outcomes of people with HIV
3. Reduce HIV-related disparities and health inequities
4. Achieve integrated and coordinated efforts to address the HIV epidemic among all partners and stakeholders.

For over 30 years, the Midwest AIDS Training + Education Center (MATEC) has provided educational opportunities to clinicians providing care to HIV patients and those at risk for HIV. The Clinician Scholars Program is MATEC's crucial effort to address the needs of minority and minority-serving clinicians and their communities.

The MATEC Clinician Scholars Program is designed for front-line clinicians who are interested in expanding their capacity to provide HIV/AIDS care. Scholars receive twelve months of in-depth training on HIV/AIDS diagnosis, treatment, medical management, and prevention of HIV infection. It is a structured, yet participant-centered, program that includes:

- A minimum of 12 hours of clinical practicum in HIV care
- A minimum of 40 hours of skill building training, including but not limited to: intensive two-day immersion institute; distance learning offerings; face-to-face meetings or trainings; and clinical consultation
- Participation in the monthly Clinician Scholars Program Collaborative Learning Series
- Presentation and review of Scholar cases

Learn from Leading HIV/AIDS Experts

The MATEC network provides Scholars access to the most up-to-date HIV/AIDS information, resources, and training opportunities directed by expert faculty. In the MATEC Clinician Scholars Program, participants can expect to build skills and knowledge through:

Mentorship - Experts in HIV/AIDS care guide participants through the MATEC Clinician Scholars Program

Clinical Consultation - Opportunities to consult with local and regional experts experienced in managing HIV/AIDS

Networking Opportunities - Valuable interactions with MATEC faculty, local and regional HIV/AIDS care providers, and other Scholars

Clinical Interaction - Participants will observe the care of patients with HIV infection and respond to case presentations

Who is Eligible?

The Clinician Scholars Program is open to minority and minority-serving **Physicians, Physician Assistants, Advanced Practice Nurses** and **Clinical Pharmacists** who are licensed to provide care in the Midwest and:

- Provide direct clinical care services
- Understand HIV/AIDS fundamentals
- Seek to increase their capacity to diagnosis, manage and/or prevent HIV infection
