

## Mental Health/Substance Use Care Readiness Assessment Tool: Clinic/Health Center Perspective

The flowchart below gives an overview of a way clinics/health centers can use the AETC Program Mental Health/Substance Use Care Readiness Assessment tool. Because of differences between HIV care programs and target population(s), use of the assessment tool will allow for individualized integration of evidence-based mental health and substance use care among primary HIV care providing teams. You can follow the steps independently with your clinic/health center staff and/or you can contact your local AIDS Education and Training Center (AETC) at <http://www.aidsetc.org/directory> to request that a trainer help with the process.
