Clinical Team:

What are my HIV medication(s)?

What are my other medication(s)?

What is coinfection?

Coinfection occurs when a person with HIV is also infected with the hepatitis C virus (HCV).

HIV/HCV coinfection is a common scenario because of shared risk factors of both viruses.

HIV/HCV coinfection increases the risk of more severe liver disease, organ failure and other serious health issues.

Treatment of HCV in people with HIV should be a priority.

What kind of HCV do I have? (circled below)

There are 7 different HCV genotypes (types). A genotype is the strain of the virus you have in your body.

You have genotype: 1a, 1b, 2, 3, 4, 5, 6

What stage of liver disease do I have?

Liver disease is "staged" based on the amount of scar tissue or fibrosis in the liver:

- Mild Fibrosis (Stage 1) Cirrhosis (Stage 4)
 Moderate Fibrosis (Stage 2) Decompensated Cirrhosis
 Bridging Fibrosis (Stage 3) (Stage 5)

What is my HCV load after starting HCV meds?

0-4 Weeks _____

12 Weeks _____

24 Weeks _____

What was my last HIV viral load and CD4?

VL _____ Date _____

CD4 _____ Date _____

Which HCV medications am I on?

Daklinza[®] (daclatasvir) 1 tablet daily

90mg 60mg 30mg

Epclusa[®] (sofosbuvir/velpatasvir) 400mg/100mg

1 tablet daily

Harvoni[®] (ledipasvir/sofosbuvir) 90mg/400mg

1 tablet daily

Mavyret[®] (glecaprevir/pibrentasvir) 100mg/40mg

3 tablets daily with food

Copegus[®], **Rebetol**[®], **Ribasphere**[®] (ribavirin) 200mg

____ tablets twice daily with food

Sovaldi[™] (sofosbuvir) 400mg

1 tablet daily

Vosevi[®] (sofosbuvir/velpatasvir/voxilaprevir)

400mg/100mg/100mg

1 tablet daily with food

Zepatier[®] (elbasvir/grazoprevir) 50mg/100mg

1 tablet daily

How long is the HCV treatment?

8 weeks 12 weeks 16 weeks _____ weeks
